OVERVIEW

Senior Fullstack Developer with 9+ years of experience leading frontend architecture, real-time detection SDKs, and tooling for clinical and med-tech platforms. Strong in Vue is and modern JavaScript, with growing use of React and TypeScript in production. Skilled at connecting frontend systems to backends built in Node.js and Python. Architect of scalable, camera-integrated SDKs used by millions, and internal tools supporting clinical, QA, and product teams. Known for building mature, high-performance systems with a focus on real-time accuracy and development efficiency.

Experience —

Senior Fullstack Engineer & Web Architect (Jun 2016 - Present) Seekwell / Luna / 6over6 (acquired & rebranded)

While I held full technical ownership across all frontend projects, I also took on tech lead responsibilities during periods when we worked in product-focused pods. In these rotations, I was assigned to lead the development of new products and SDKs from scratch, rather than maintaining existing ones. I guided architecture decisions, mentored teammates, aligned with backend and product, and took ownership of delivery quality. These leadership experiences complemented my broader role as architect and primary developer across the company's frontend systems.

- Designed and built real-time flows using TFJS, YOLO, Facemesh, Pose, microphone, camera, and device sensors to support clinical detection, voice input, and guided user interactions
- Created schema-driven, drag-and-drop tools that render UI dynamically via JSON Schema, SVG, and component builders (enabling non-devs to author flows)
- Developed camera-based SDKs embedded in external sites that use canvas, real-time detection, and image optimization to extract visual data with high precision
- Architected session tracking tools capable of handling large volumes of session data, dynamically rendering different layouts and content types based on each dataset's structure. supporting QA, clinical, dev, and product teams.
- Built synced multi-device SDK using WebSockets and SVG overlays to align phone and desktop visuals for prescription detection
- Led all frontend architecture, focusing on high performance, efficient asset handling, and robust internal tooling. Optimized FPS, tailored behavior to specific devices (e.g., iPhone camera specs), and implemented asset pipelines to ensure fast, reliable user experiences.
- Built a secure internal platform using microfrontend architecture and OAuth-based authentication, providing role-based access to a suite of operational tools including flow management, debug, and data review interfaces.
- Delivered stable systems considered mature and low-maintenance, used by millions globally

Graphic Design & 3d Modeling Freelance (Jan 2014 - Jun 2016)

Delivering visually compelling assets for digital and print media. Turned concepts into high-impact visuals using a variety of tools

Frontend

Other

- EDUCATION -

Elevation Academy (2016 - 2016) Intense bootcamp for computer programming

LA ORT College (2013 - 2014)

Associates degree in Digital Media & frontend development

University of Brighton (2005 - 2008)

Bsc (hons) in Building Surveying

TECHNICAL SKILLS -

Vue.js (primary), React, TypeScript, Javascript,

SCSS, CSS, HTML, Websockets **Architecture**

Frontend architecture, JSON-schema-driven

Ui's, JS packages Node js, Python. Flask, Rest API's **Backend**

Devops & Tools Docker, Docker Compose, Redis, CI/CD, Git

Real-time CV pipelines, medical SDKs, state

machines, SVG precision overlays
